How to Install the HexaLock Vista Compatibility Utility

Please Start the Utility setup file in Administrator Mode (right click the setup.exe and click "Run as administrator").

Next, 'double click' on the Setup file and it will install the "HLV" Vista Compatibility Utility. The Installation Program will set up a Desktop Icon for the Utility on your computer desktop.

To run Hexalock protected Discs, just click this Desktop Icon, and in the open window click the "Enable Vista Compatibility" button. You can now run the protected discs as normal. Upon rebooting your computer, you will need to click this Desktop Icon and click the "Enable Vista Compatibility" button again to run protected discs.
